

4TH NEWSLETTER OF THE STEAMITUP PROJECT

STEAM-Ed Education Ireland through Lockdown Challenges February 2021

Have the kids been somewhat bored over the lockdown and want to do something creative? Why not try a cool and educative experiment! Steam-ed Ireland have been promoting STEAM education through Lockdown Challenges to motivate young learners to immerse themselves in challenges based on Science, Technology, Engineering, Arts and Mathematics.

STEAM education is essential in the building of knowledge. It fosters new explorations of creative thinking, problem solving and innovation! STEAM-Ed Ireland has been encouraging students to build DIY planters, make your own face-masks, inventions from recycled materials and so much more! Why not take advantage of different experiments you can do through science, technology, engineering, art and maths and embrace your STEAM skills!
